

4장 실습_리스트_2

- 다음과 같은 출력이 발생하도록 강의자료를 보며 코드를 작성할 것

출력 예시

```
1. Get input data a string of numbers
Enter data : 34123499
2. Convert string to list L
L = ['3', '4', '1', '2', '3', '4', '9', '9']
3. Print the largest and smallest elements of the list L
Max data is 9, Min data is 1
4. Print list M in descending order of the elements in list L
M = ['9', '9', '4', '4', '3', '3', '2', '1']
```

```
1. Get input data a string of numbers
Enter data :
WARNING : No input data
```

```
1. Get input data a string of numbers
Enter data : example3!
WARNING : No numeric data
```

4장 실습_리스트_3

- 다음과 같은 출력이 발생하도록 코딩 할 것

출력
예시

1. Enter sentence : python5 python python! python
The sentence is composed of 4 words
2. Enter word to search : python
Index number where the search word was first found is 1

1. Enter sentence : -100 -34A
The sentence is composed of 2 words
2. Enter word to search : -100
Index number where the search word was first found is 0

1. Enter sentence : you
The sentence is composed of 1 words
2. Enter word to search : he
WARNING : No found

1. Enter sentence : -23 is not good!
The sentence is composed of 4 words
2. Enter word to search : 
WARNING : No found

→ enter key만

1. Enter sentence : 
WARNING : No input
sentence

→ 입력
